

You Can't Wait to See Your Baby.

So Don't

She's plump and perfect and
sucking her thumb.

He's kicking and turning
and has a nose just like yours.

And you can see it all with perfect clarity
-- weeks, even months, before birth!

Get a Beautiful First Look at Your Baby at Bayfront.

Bayfront Medical Center is proud to be one of the first hospitals on the West Coast of Florida to bring expectant parents the technology of 4-D ultrasound: 3-D images with the added dimension of time. Our GE 4-D ultrasound provides incredible images of your baby with a real-time view of all the action. Not only will you be able to see what your baby looks like and how your baby moves, but physicians and sonographers can better analyze the behavior and fetal development of your baby. This added information can help you feel more confident during your pregnancy.

Scheduling Your 4-D Ultrasound at Bayfront is All About Perfect Timing.

Be sure to take advantage of the perfect window of opportunity for the best view of your baby. Expectant women between 20 – 30 weeks of pregnancy have the best chance of seeing clear images of their baby using 4-D technology. Before or after this time, sonographers may have difficulty capturing a clear image of the baby.

Simply call 727-553-7171 to schedule your appointment.

A Priceless Experience.

This new technology is truly priceless...and also very affordable! Call us at 727-553-7171 and we will be happy to explain the cost of the ultrasound to you.

Meeting your baby this way is a moment you will cherish forever. We'll provide you with a complimentary CD-ROM and VHS tape of your exam, as well as black and white still images. We want you to take home something you can share with your loved ones.

You Can See Clearly Now.

The best place to see your baby so clearly is clear: Bayfront. Your 4-D ultrasound will take place in Bayfront Medical Plaza, a beautiful outpatient center adjacent to Bayfront Medical Center. On the day of your ultrasound, you will register with an ultrasound receptionist on the first floor, and you'll be shown into an exam room for the ultrasound. Parking is available in a covered garage next to the Plaza.

This technology is wonderful -- and so are our sonographers. Bayfront's obstetrical registered sonographers are specially trained to use 4-D technology. Each mom and family is important to us, and we'll go the extra mile to give you the best images of your baby possible. We understand that meeting your baby in this way is an experience you are looking forward to. We are so pleased you have chosen Bayfront to be a part of your joy.

For more information about 4-D ultrasound at Bayfront Medical Center, please call 727-553-7171, or visit us online at www.bayfront.org.
